Accomplishments/Activities/Meetings

In week 2 we unfortunately did not have a meeting with our customer. However, thankfully there were no pressing concerns that needed to be addressed for this week. We did conduct a group meeting with our mentor Rock Sabetto.

The individually applied hours included a group meeting on Thursday, for those who could attend. They also include research on both the tools we will be using, as well as similar generative adversarial networks that are out there.

The individual hours also contained work conducted on finalizing our final proposal.

Issues

There are no issues that needed to be addressed for this week.

Open Action Items

The major open action is finalizing our report to send to our customer.

Plans for next week

We have discussed which tools we will be using, specifically Tensorflow and Keras. We will continue researching these tools, and discover similar Generative Adversarial Networks and how they were implemented. This will help us create a strong foundation for our own project.
